

Visits, tasks and follow-up

The calendar is more than a date book. It connects the selected property, participants, reminders, messages and the outcome of the visit.

1

Select the right property

When the request is ambiguous, choose from the strongest matches before creating the visit.

Do this: Open the contact or conversation, review the suggested properties, and confirm one.

2

Create the event

Add date, time, property, participants and notes. Use the relevant event type so the correct message wording is available.

Do this: Calendar -> New event, or ask Copilot to schedule the selected visit.

3

Notify participants

Send the initial details, and notify participants again when the time, property or attendee list changes.

Do this: Preview the participant list and message before sending.

4

Check the outcome

After the expected time, ask whether the visit or task was completed. Record the response instead of closing it silently.

Do this: Use the participant check-in action and update the event status.

5

Respect quiet hours

WhatsApp and push reminders pause during configured quiet hours; in-app reminders remain available and deferred messages resume later.

Do this: Review Settings before changing the team's reminder policy.

Default client quiet hours

9:00 PM to 8:00 AM

Default agent quiet hours

10:00 PM to 7:00 AM

Plan visits and follow-ups

Calendar combines natural-language scheduling, event views and operational to-dos. Use the event type so the right participant message and completion check are available.

The screenshot shows the CONVOREAL ENGINE interface. The top navigation bar includes a search bar, a balance of 4,588 or, and a user profile for Praneeth. The left sidebar lists various modules: Dashboard, Inbox, Groups (marked BETA), Contacts, Inventory, Liaisons, Calendar (selected), Journey (marked BETA), Automations, Broadcasts, Ads, Admin Panel, and Settings. Below these are 'QUICK ACCESS' links for New Deals, Pending Quotes, Priority Tasks, and Follow-ups. The main content area is titled 'Calendar' and includes a subtitle: 'Log site visits, calls, and follow-ups by typing or speaking — and see the whole team's day at a glance.' A search bar prompts the user to 'Try "Site visit with Varun at JP Nagar plot tomorrow 4pm" — or tap the mic and say it'. The calendar view is for September 2026, showing a grid of dates from 30 to 10. A '+ Schedule' button is prominent. To the right, a 'To-Do Task List' displays four tasks with checkboxes and priority levels (MEDIUM, HIGH). The tasks are: 'Follow up on corner properties', 'Find buyer for Adarsh Parmedo's Villa No. 4', 'Work on Dinakar site — E khata', and 'Update on Suleiman's client - 9,600 sqft'. A 'Help & feedback' button is at the bottom right.

Type or speak a visit, switch between Month, Week, Team and Agenda, and keep the to-do list beside the calendar.

Schedule

Add the selected property, date, time, participants and notes.

Notify

Preview initial or changed event details before sending them.

Follow up

Ask participants whether the visit or task was completed.

Record the outcome

Update status, requirement changes and the next action.
