UP**

Start at www.convoreal.com

Edition: September 2026

Your first 15 minutes

Complete these once. ConvoReal then turns incoming enquiries, listings and follow-ups into a shared operating system for your business.

1

Sign in and verify your WhatsApp number

Use the same number reserved in your invitation, if one was supplied. Your verified number protects the invite and connects alerts to the right person.

Do this: Open the invitation, create the account, verify email and complete the WhatsApp OTP.

2

Set up the workspace

Account owners connect the business WhatsApp number and submit the ready-made templates for Meta approval. Invited team members can skip account-level setup.

Do this: Owners: Dashboard onboarding -> Connect WhatsApp. Team members: review your profile and role.

3

Add one real property

Forward a listing message and photos to the connected number, or use Inventory -> Add Property. AI extracts the details and asks you to confirm before publishing.

Do this: Check price, area, property type, exact location and owner-reference details before confirming.

4

Bring in buyers and requirements

Import phone contacts or a CSV. Keep each buyer's requirement in the Requirements view - location, budget, property type, purpose and readiness.

Do this: Open Contacts -> Import, then confirm the important requirements for your active buyers.

5

Optional portal lead sync

Forward 99acres, MagicBricks or Housing enquiry emails to your account's lead address so they become contacts automatically.

Do this: Settings -> Other -> Email Lead Sourcing.

Start with today's priorities

The Dashboard brings tasks, active journeys, requests to act on and engagement signals into one place. Open a card to work the item instead of searching across modules.

The screenshot shows the Convoreal Engine Dashboard. The top navigation bar includes the Convoreal Engine logo, a search bar, a currency indicator (₹ 4,568 cr), and a user profile (Praneeth). The left sidebar lists various modules: Dashboard, Inbox, Groups (BETA), Contacts, Inventory, Liaisons, Calendar, Journey (BETA), Automations, Broadcasts, Ads, Admin Panel, and Settings. The main content area is titled 'Dashboard' and 'Focus'. The 'Focus' section provides a practical starting point for the day, showing three main cards: 'TASKS & VISITS' (8 items), 'TOP JOURNEYS' (58 items), and 'REQUESTS TO ACT ON' (216 items). Below these are three smaller cards: 'WINDOWS CLOSING' (0), 'HOT GOING QUIET' (20), and 'AWAITING REPLY' (0). At the bottom, there's an 'ACTIVITY INSIGHTS' section with filters for Today, Yesterday, 7 days, 30 days, and Custom. It displays six metrics: NEW INQUIRIES (0), NEW CONTACTS (0), MSGS RECEIVED (0), MSGS SENT (6), RESPONDED (0), and SHOWCASE OPENS (0).

Dashboard -> Focus gives a practical starting point for the day.

Tasks and visits

Work overdue commitments and today's appointments first.

Top journeys

Open the relationships closest to a meaningful next step.

Requests to act on

Handle contacts waiting for an answer or decision.

Activity insights

Track replies, sent messages and Showcase engagement.

Inventory that stays useful

A listing is useful only when it can be trusted, matched and shared. ConvoReal keeps those actions connected.

AI-assisted listing capture

Forward text, images, documents and location. Review the extracted draft before it becomes part of the inventory.

Probable duplicate warning

A new map pin within about 100 metres of an existing listing is flagged for review. It is a warning, not an automatic rejection.

Single, shareable Showcase

Each confirmed property receives a public presentation link. Share one property, a chosen set, or a filtered search result.

Client feedback improves matching

Buyers can rate or respond to shared properties. Confirmed responses help refine future recommendations.

Protected details

Sensitive owner and exact-location details stay guarded. Share only what the client or collaborating consultant needs.

Portal drift review

When a portal advertisement and inventory appear inconsistent, review the alert and unmap a wrongly linked advertisement when needed.

A good listing checklist

1	Transaction	Sale / rent, availability, asking price and negotiability.
2	Area	Plot, land, built-up and carpet area must be stored in the correct fields.
3	Location	Locality plus a verified map pin. Review any nearby probable duplicate.
4	Media	Best photos first; add documents, floor plans and video where available.

Inventory at a glance

Use Inventory to review availability, Showcase status, portal drift and the source of each listing. Add Property opens a guided form when a WhatsApp forward is not available.

Inventory

Manage listings, create flyers, track approvals, and run ad campaigns.

Property Inventory

Manage your real estate listings and publish properties to showcase on the main portal.

Portal Sync Share Showcase Portal Import Shared + Add Property

164 Total Listings 163 Showcased Publicly 157 Available Units 3 Sold / Under Contract

2 portal ads out of step with your inventory Spotted from the leads and emails already in the Engine — the row clears itself once the ad and the listing agree again.

Ad live on withdrawn stock Magicbricks ad 855145277 2400 sqft Residential Plot in Surya City Phase 2 on a 80 feet road (PROP-1063) 8 leads in the last 30 days, but the listing is Archived. You are paying for an ad on withdrawn stock — take it down, or relist the property.

Ad and listing disagree Housing.com ad 70604248 3 BHK Independent Building Floor House for Sale in Emerald Enclave, Mysuru (PROP-1154) Its last lead email says PMH Apartment vs Residential House (ad vs listing) — one side was edited and the other was not.

All Listings Review Archived All (160) Direct (74) Agent referred (62)

e.g. residential properties > 10 Cr, 3 BHK villa Filter by locality (Google Maps) Near me

Inventory keeps review, sharing and publication controls together.

Add New Property Listing

Configure listing specifications, location details, and matching preferences.

Property Details Matching Contacts (0)

Property Title *
e.g. Luxurious 3BHK Apartment in Downtown

Listing Type Price (INR) *
For Sale e.g. 12000000

Property Type
Flat/ Apartment

Property Location
Project Name or Area / Sublocality *
Search project (e.g. Prestige) or area (e.g. Indiranagar)...

City * State *
e.g. Bangalore e.g. Karnataka

Landmark / Street Address
e.g. Near Metro Station

Google Map Link (Shared on inquiry approval only)
e.g. <https://maps.google.com/?q=...>

Guard exact location
Off by default for this property type — turn on to hide the street address, map pin and coordinates until you approve a request. ☐

Confidential listing
Anyone viewing the public link sees only the type, locality and a price band until you approve them. Link preview and search engines get nothing, and photos you upload are watermarked to the viewer. ☐

Add Property

Enter the title, transaction, price, property type and verified location. Use Guard exact location and Confidential listing when the public view must reveal less than the internal record.

Forward a property from WhatsApp

A real listing can arrive as text, photos and video. ConvoReal analyses the content, shows the extracted draft, and creates the property only after confirmation.

1. Forward listing text and media. 2. Review the extracted facts. 3. Confirm. 4. Open the created property in Inventory.

Review before confirming

Correct price, area, type, location and any field inferred from free-form text.

Media stays attached

Photos and video sent with the listing remain connected to the resulting property record.

No silent creation

The bot presents Confirm and Cancel so the draft does not enter inventory without approval.

Continue on web or mobile

Use the returned property code or dashboard link to refine, match and share the listing.

Contacts, requirements and matching

Treat the requirement as the single source of truth. Good matching depends on confirmed needs, not assumptions made from an old conversation.

One requirement profile

Record Buy, Rent or Either; preferred locations; budget; category; size; timeline; and readiness. Update this when the client confirms a change.

Radar

See which contacts fit which properties today. Review the match before sharing, especially when several similar properties appear.

Confirm before acting

When a WhatsApp instruction could refer to several properties, select from the best matches before scheduling, sharing or messaging.

Language control

Messages follow the recipient's language preference. Seller replies should remain in the sender's chosen language instead of switching unexpectedly.

Contact temperature

A lead becomes hot based on meaningful engagement, not simply because a message was sent to them.

No repeated questions

The assistant should reuse confirmed facts and avoid asking again for information already captured in the requirement.

Before you send a property

Confirm the recipient, verify the intended property or selected set, review protected details, and preview the WhatsApp message. A rate-limit warning means wait and retry - it does not necessarily mean the earlier send failed.

Useful sharing choices

One property	A direct listing link for a specific enquiry.
Selected properties	A curated shortlist for one or more contacts.
Filtered Showcase	A catalogue already narrowed by location or category.
Inventory collaboration	Send selected inventory to another account holder for review and approval.

From contact capture to a match

Contacts can be drafted from WhatsApp and reviewed before saving. Match Radar then connects confirmed requirements to suitable inventory.

WhatsApp prepares a contact draft, including classification, and waits for confirmation. The mobile number is masked in this guide.

Radar shows the listing, matching contacts, fit score and the action to send a reviewed match alert.

Visits, tasks and follow-up

The calendar is more than a date book. It connects the selected property, participants, reminders, messages and the outcome of the visit.

1

Select the right property

When the request is ambiguous, choose from the strongest matches before creating the visit.
Do this: Open the contact or conversation, review the suggested properties, and confirm one.

2

Create the event

Add date, time, property, participants and notes. Use the relevant event type so the correct message wording is available.
Do this: Calendar -> New event, or ask Copilot to schedule the selected visit.

3

Notify participants

Send the initial details, and notify participants again when the time, property or attendee list changes.
Do this: Preview the participant list and message before sending.

4

Check the outcome

After the expected time, ask whether the visit or task was completed. Record the response instead of closing it silently.
Do this: Use the participant check-in action and update the event status.

5

Respect quiet hours

WhatsApp and push reminders pause during configured quiet hours; in-app reminders remain available and deferred messages resume later.
Do this: Review Settings before changing the team's reminder policy.

Default client quiet hours

9:00 PM to 8:00 AM

Default agent quiet hours

10:00 PM to 7:00 AM

Plan visits and follow-ups

Calendar combines natural-language scheduling, event views and operational to-dos. Use the event type so the right participant message and completion check are available.

The screenshot shows the CONVOREAL ENGINE interface. The top navigation bar includes a search bar for deals, contacts, or properties, and a user profile for Praneeth. The left sidebar lists various modules: Dashboard, Inbox, Groups (marked BETA), Contacts, Inventory, Liaisons, Calendar (selected), Journey (marked BETA), Automations, Broadcasts, Ads, Admin Panel, and Settings. Below the sidebar is a 'QUICK ACCESS' section with links to New Deals, Pending Quotes, Priority Tasks, and Follow-ups. The main content area is titled 'Calendar' and includes a subtitle: 'Log site visits, calls, and follow-ups by typing or speaking — and see the whole team's day at a glance.' A search bar within the calendar section suggests a voice command: 'Try "Site visit with Varun at JP Nagar plot tomorrow 4pm" — or tap the mic and say it'. The calendar view is for September 2026, showing a grid of dates from 30 to 10. A '+ Schedule' button is prominent. To the right of the calendar is a 'To-Do Task List' with a filter for 'All Tasks'. It contains four tasks: 'Follow up on corner properties' (Medium Priority), 'Find buyer for Adarsh Parmedo's Villa No. 4' (High Priority), 'Work on Dinakar site — E khata' (Medium Priority), and 'Update on Suleiman's client - 9,600 sqft' (Medium Priority). A 'Help & feedback' button is at the bottom right.

Type or speak a visit, switch between Month, Week, Team and Agenda, and keep the to-do list beside the calendar.

Schedule

Add the selected property, date, time, participants and notes.

Notify

Preview initial or changed event details before sending them.

Follow up

Ask participants whether the visit or task was completed.

Record the outcome

Update status, requirement changes and the next action.

Collaborate without losing control

ConvoReal supports team access and account-to-account inventory collaboration. These are different: team members work inside one workspace; other account holders receive reviewed copies into their own inventory.

Team invite

Adds a person to your existing workspace with an assigned role. Their access follows owner, admin, agent or viewer permissions.

Beta seat

Lets a consultant create a separate ConvoReal account. A reserved phone number must be verified when the invite is bound to one.

Inventory share

Choose contacts and properties, then send. Existing account holders receive the inventory through the review flow.

WhatsApp invitation

If the recipient does not yet use ConvoReal, share the personalized invitation from the typed WhatsApp number.

Roles at a glance

Owner	Connects account services, manages workspace settings, roles and billing.
Admin	Helps manage the workspace and operational configuration.
Agent	Works contacts, inventory, messages, matches, visits and follow-ups.
Viewer	Read-focused access as permitted by the workspace.

A safe habit

Always verify the person, selected properties and message preview before sharing. Do not expose owner details, exact locations or internal notes unless the workflow explicitly permits it.

Invite a consultant

Settings -> Invites shows the available beta seats and lets you reserve an invitation for a specific WhatsApp number. Existing invitations remain available for a controlled resend.

The recipient name or note identifies the invitation. Supplying a number binds onboarding to WhatsApp OTP verification.

Name the recipient

Use a recognisable name or note so the invitation can be found later.

Reserve the number

Optional, but recommended when you already know the recipient's WhatsApp number.

Generate and share

Open WhatsApp for the intended recipient and review the personalised message.

Resend safely

Use the invitation already associated with that person instead of creating duplicates.

Privacy note

Real mobile numbers and invitation codes are not displayed in this guide. The screen is cropped to the invitation controls.

A simple daily rhythm

Ten focused minutes at the beginning and end of the day keeps the system useful and prevents important conversations from slipping through.

Morning	Open Today and Calendar	Review visits, overdue tasks, reminders and participant follow-ups.
Morning	Check Inbox and Gaps	Handle meaningful replies and any conversations that may have been missed.
Midday	Review Radar	Share a small, relevant shortlist instead of a broad catalogue.
As needed	Confirm new listings	Correct extracted details and review nearby duplicate warnings.
Evening	Update outcomes	Record visit results, requirement changes, property feedback and next actions.

Need help?

Use the Copilot button inside ConvoReal and ask in plain language: Show me how to add a contact, help me set up my Showcase, show missed conversations, or how do I set bot reply rules?

Keep this guide

Open the latest copy at www.convoreal.com/guides/convoreal-quick-start-guide.pdf. Product screens evolve; the in-app Copilot remains the best place for step-by-step help on the screen you are using.

Less data entry. Better follow-up. More trusted deals.

CONVOREAL

Connect your WhatsApp Business number

Use Meta's hosted Embedded Signup from ConvoReal. Choose the path that matches how the number is used today.

EXISTING NUMBER

WhatsApp Business app + Coexistence

Choose this when the business number is already active in the WhatsApp Business app.

- Keep the WhatsApp Business app installed and the number registered.
- Do not delete the WhatsApp account or migrate the number before starting.
- Complete Meta's Coexistence flow and confirm the same business number.
- Continue using the app while ConvoReal connects through Cloud API, subject to Meta eligibility.

NEW NUMBER

Dedicated number + Embedded Signup

Choose this for a fresh business line or a number not currently used in WhatsApp.

- The number must receive an SMS or voice verification code.
- Create or select the Meta Business Portfolio and WABA in the hosted flow.
- Add the display name, business category and phone number.
- Enter the verification code inside Meta's window, then return to ConvoReal.

Before you start

- A Facebook login with admin access to the correct Meta Business Portfolio.
- Legal business details, website, business category and intended WhatsApp display name.
- Access to the phone for SMS or voice verification.
- Authority to grant ConvoReal the requested WhatsApp permissions.

Security

Enter your Facebook password and verification code only inside Meta's hosted window. Never send the password or OTP to ConvoReal support, an agent or a teammate.

Connect in six steps

The exact wording can change as Meta updates its screens. Stay in Meta's hosted window until it confirms completion.

1 Open WhatsApp settings

In ConvoReal, open Settings > WhatsApp and choose Connect with Meta.

2 Log in to Meta

Use the Facebook account that administers the business. Continue inside Meta's hosted window.

3 Select the business

Choose the correct Meta Business Portfolio, or create one if the business has none.

4 Select or create the WABA

Choose the WhatsApp Business Account and select Existing app number or New dedicated number.

5 Add and verify the number

Confirm the display name and category, then verify by SMS or voice when Meta requests it.

6 Approve and return

Grant the requested permissions. Return to ConvoReal, wait for Connected and send a test message.

After connection

- Confirm the status is Connected and the correct business number is shown.
- Sync message templates, then verify one inbound and one outbound test message.
- If the flow stops at WABA only, add a phone number in Meta and reconnect.

Give your inventory an agency web address

Publish once in ConvoReal. Share every live company listing from one branded showcase under your agency name.

EXAMPLE

NIKHIL ESTATES

nikhilestates.convoreal.com

One link. Your brand. Your current published inventory.

SET IT UP IN FOUR STEPS

1

Add properties

Create listings on web or mobile, or ingest property details and photos from WhatsApp.

2

Publish to Showcase

Set the listing to Published. Drafts stay inside your workspace and do not appear publicly.

3

Claim your address

Go to Settings > Showcase > General > Brand. Set Brand Name to Nikhil Estates and Web Address Name to nikhilestates, then save.

4

Share everywhere

Copy the business link into WhatsApp, visiting cards, social profiles or portal listings. New published properties appear automatically.

WHAT BUYERS SEE

- All published company properties in one searchable catalogue.
- Your agency name, chosen design, contact details and WhatsApp enquiry action.
- Fresh prices, photos and availability whenever you update ConvoReal.

ADDRESS RULES

- Use lowercase letters, numbers and hyphens only.
- The name must be unique; reserved labels such as www, app, admin and api are unavailable.
- The web address goes live as soon as an account admin saves it.

TIP Keep the web-address name short and close to the agency name so buyers can remember it.
